**RAINFALL**

This 1992 Napa Valley vintage chart depicts the high and low temperatures for each day of the growing season, from January through the start of October. Temperature, and a grapevine's response to it, has a significant effect on the character of the vintage. Relatively speaking, 1992 brought an early, yet well-paced harvest due to an early bloom and to warm temperatures in July and early August transitioning to cooler weather in late August and September.
